Ease Stash

Version 1.0.0 — Installation & Quick Start

Installation

The easiest way to install and license is by using the aescripts + aeplugins manager. To install a trial, you can select **'Add Trial'** from the **'Account'** menu.

Alternatively you can use the ZXP/UXP Installer.

Requirements

After Effects 2024 or later (macOS / Windows).

Getting Started

1. Open **Window > Extensions > Ease Stash** in After Effects.
2. Select two or more consecutive keyframes on a property — the speed graph appears in the panel.
3. Drag the influence controllers under the graph to shape the ease. Hold **Shift** to adjust both ends of a segment symmetrically, or **Cmd/Ctrl** for fine adjustment.
4. Switch interpolation with the buttons: Linear, Easy Ease, Ease In, Ease Out, and Hold.
5. Nudge the selected keyframes by ±1 frame with the arrow buttons (hold **Shift** for ±10 frames).
6. **Stock a graph**: pick a numbered slot and press **Save**. Ease Stash remembers the keyframe selection itself — use **Reveal** to jump back to those keyframes in the timeline, or **Delete** to clear the slot.
7. **Stock ease values**: use the E slots to copy the ease of a keyframe and paste it onto any other keyframes.

Trial & License

Ease Stash comes with a fully functional 10-day trial. To activate your license, open the panel flyout menu (≡ at the top-right of the panel tab), choose **License…**, and enter your license code. The same dialog lets you deactivate the license on this machine, check for updates, and view product information.

Support

Open the flyout menu → **License…** → **Support** tab to send a support ticket directly from the panel, or visit https://aescripts.com/ease-stash/.
