# JustScrollit V1.0

**Cinematic end credit rolls builder for After Effects.**

By @rojusscripts. Created by Pedro Justiniano
with a little hand from my friend Daian Gan
and a huge help from Google Antigravity.

## How to install.

**• Using aescripts Manager.**

The easiest way to install the JustScrollit script is by using the aescripts manager app. *https://aescripts.com/learn/post/aescripts-aeplugins-manager-app*

It can install, license and update all your tools in one click!

**• Manual installation.**

Inside the JustScrollit folder there is the **JustScrollit.jsxbin**. To manually install it place the **JustCrollit.jsxbin** file at:

**Mac:**
*"/Applications/Adobe After Effects (version)/Scripts/ScriptUI Panels/“*

**Windows:**
*"C:Program Files/Adobe/Adobe After Effects (version)/Support Files/Scripts/ScriptUI Panels/"*

**• Permissions.**

Go to After Effects>Settings>Scripting & Expressions and make sure that the Allow Scripts to Write Files and Access Network check box is toggled on.

**• Licensing.**

In After Effects, open the JustScrollit panel window by going to **Window** and rolling all the way down until you find **JustScrollit.jsxbin** and it will pop up the licensing window. There you can enter the key provided after purchasing the product. If you don’t have it you can find your licenses at the “**My Downloads & Licenses**” section of your aescripts.com user account, or via the aescripts manager app. If you have it enter it and click ok. You can also run a 10 days trial version with some limitations: you can create scrolls limited to a 5 minutes duration and only in HD 1920x1080 or Reel 1080x1920.

## Quick start.

You can start by entering a name to your new credits project and clicking on **Smart Import** to load a simple text document (.txt) containing your raw credit list and **JustScrollit** will format it for you in columns or single lines depending on the content, which you can later edit to fit your needs. You can also create your roll list from scratch or from a preset template. Add pre-formatted lines, columns and images or video files with the create buttons, set a custom duration or let the script set the duration automatically for you, click on **Scroll it!** and generate a new composition that you can later edit as you want. You can also export your list as a CSV file that you can edit outside After Effects in Excel, Google Sheets or Apple Numbers and import it again.

You can find a detailed User’s guide at the **Guide** section or as a **PDF** file inside the JustScrollit_Guide folder.
