# Parallaxer V3

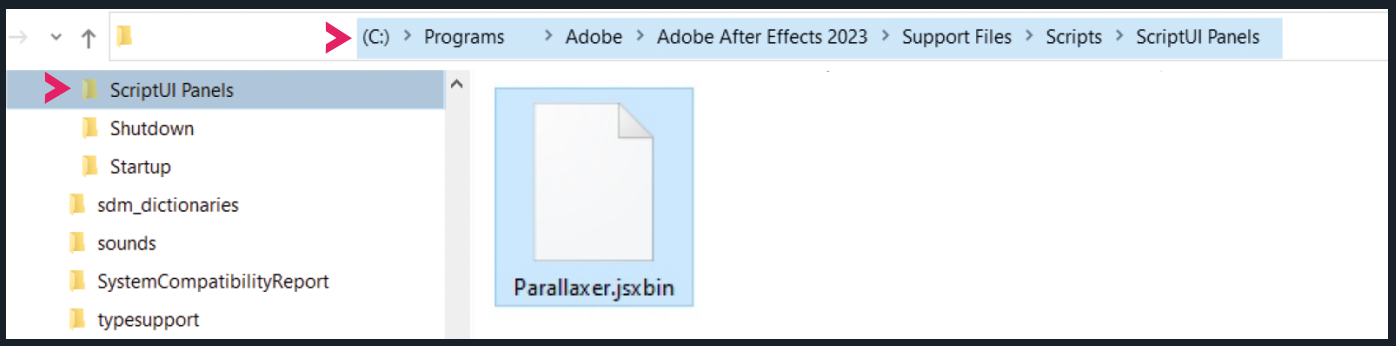

Script for Adobe After Effects

## Install Guide

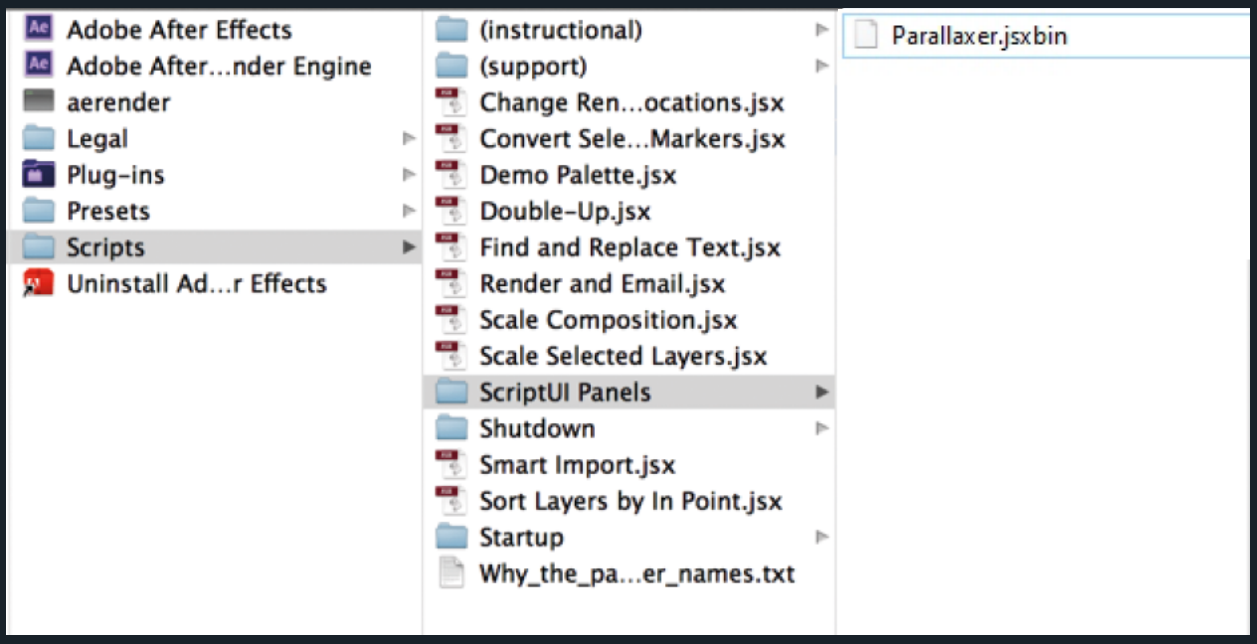

The easiest way to install and license is by using the **aescripts + aeplugins manager**

To install Parallaxer copy / paste **Parallaxer.jsxbin** in your Adobe After effects **ScriptUI Panels** folder :

On **Windows** this folder is located here :
(After_Effects_Install_Path) /Support Files/Script/**ScriptUI Panels**

On **Mac Os** this folder is located here:
(After_Effects_Install_Path) /Scripts/**ScriptUI Panels**

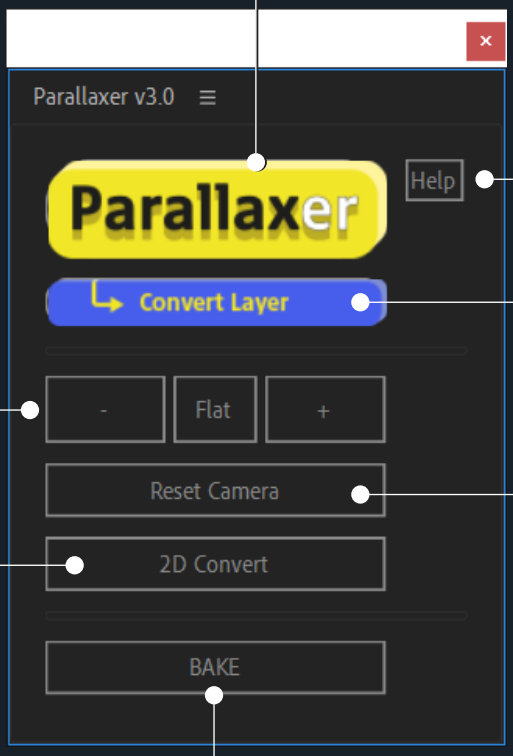

# Parallaxer V3

## Video Tutorial

> https://www.youtube.com/watch?v=wRReLNEWNWU <

**Will apply Parallaxer** on the entire scene. This is the first thing to do.

Need to refresh your memory? It's all here.

**Decrease, increase or flatten** the distance between a group of layers.

It's never too late: **Apply Parallaxer** to a single 2D or 3D layer even if the scene is baked.

**Reposition the camera** to its original position.

Will revert back your 3D Parallaxer layer to it's **original 2D appearance**.

**Will remove Parallaxer** and all it's dynamic functions to speed up the composition for animation.

It's better to bake once you are satifyied with your setup.

--> Important note for **After Effects CC 2024** (and higher) users.

A new **Advanced 3D** renderer has been introduced in After Effects 2024. This mode is not compatible with Parallaxer and is not suitable for the kind of Parallax 3D animation we're interested in, here is how to switch back to the **Classic 3D** renderer by default:

Go in Composition / Composition Settings / 3D Renderer
**Change Renderer to Classic 3D**
