Streak Warp

Version 1.0.0

Streak Warp decomposes a selected still image by color and stretches the pieces along its Position path.

Requirements

- Windows
- Adobe After Effects 2025 or 2026
- An image layer, or a precomp of your artwork. Pre-compose text and shape layers first.
- The streak is built from how the layer looks at the first selected Position key.
- macOS is not supported

Install

The easiest way to install and license is by using the aescripts + aeplugins manager app:

https://aescripts.com/learn/aescripts-aeplugins-manager-app/

To install a trial you can select 'Add Trial' from the 'Account' menu.

Alternatively, you can use the ZXP/UXP Installer:

https://aescripts.com/learn/zxp-installer/

Use

1. Select one image or precomp layer in the active composition.
2. Select the regular Position property and at least two Position keys.
3. Click Apply.
4. Use Update to regenerate the selected output, or Delete to remove it.
